

ZAALIMA DEVELOPMENT INTERNSHIP

WEEK 1 REPORT

Name: Pooja M

Project: Customer Churn Prediction & Lifetime Value (LTV) Engine

Project Objective

To analyze customer behavior, identify churn patterns, and build a foundation for churn prediction using data analytics.

Database Setup

Installed PostgreSQL, created customer_churn database, created tables, and loaded the Telco Customer Churn dataset.

Data Ingestion

Imported customer data into PostgreSQL and connected Python using SQLAlchemy.

Data Cleaning

Handled missing values, corrected data types, removed inconsistencies, and validated records.

Exploratory Data Analysis

Analyzed churn distribution, contract types, monthly charges, tenure, internet service, and customer demographics.

Key Findings

Customers with month-to-month contracts and short tenure showed higher churn. Higher monthly charges increased churn probability.

Outcome

Successfully completed database setup, data ingestion, cleaning, and exploratory analysis.
